DETAILED ACTION

This is a first office action for serial number 09/976563, entitled Building wall humidity control system, filed on October 15, 2001.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jespersen, US patent # 4,409,743.

Jespersen discloses the claimed invention an improvement in a system including a plurality of stud members (42, 42a) connected to lower plate (44) and upper plate (46) hollow and perforated headers (90 – column 4, lines 22-25), interior (100 – figure 4) and exterior (18 - figure 1) wall portions and in the stud spaces thus defined, moisture/humidity probes are installed (column 3, lines 57-60), a moisture/humidity control mechanism actuates a fan that draws regulated interior air from the living space (column 3, lines 51-56), the stud spaces and the upper headers and exhausts it to the exterior by means of exhaust ports (54, 56, 58 and 60) connected to the upper headers through the exterior wall portion; the headers are installed externally to the wall construction (figures 3 and 4); the insulation and insulation spacers is installed in the stud spaces (column 4, lines 46-51), the moisture/humidity control mechanism contains a manual override means (column 3, lines 60-61 and column 5, lines 31-36); except for

forces the air into a lower header. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a lower header, since the location of a header, either upper or lower is obvious and known in the art.
